

## Using DateTimePicker.Value in INSERT Statement

Consider a table MyDates which has two columns

```
CREATE TABLE MyDates  
(Item numeric (2),  
TheDate Date,  
CONSTRAINT pk_MyDates PRIMARY KEY (Item));
```

The Windows form for the application contains a text box (txtNum) and a DateTimePicker (dtpDate)

The SQL query to insert a row into this table

```
String strSQL = "INSERT INTO MyDates VALUES (" + txtNum.Text + ", '" +  
    String.Format ("{0:dd-MMM-yy}", dtpDate.Value) + "'");
```
